2. Closing price of the last period (C)
3. Highest price between the opening and closing price (H)
4. Lowest price between the opening and closing price (L)

This meeting is being recorded. OK

Type 1:

A gap measured from the close of the previous bar to the open of the next or current bar—it is created instantaneously at the open. There is an instant jump in prices—either up or down—with no trading activity taking place between the two prices.

SOCIETY OF TECHNICAL ANALYSTS CTA

This meeting is being recorded. OK

Type 2:

A gap measured from the high or low of the previous bar to the open of the next or current bar—it is created instantaneously at the open. There is no trading activity within that price range.

SOCIETY OF TECHNICAL ANALYSTS CTA

01 This meeting is being recorded. 04

Type 3:

A gap measured from the highs or lows of the previous bar to the highs or lows of the next or current bar—it is created only after the next or current bar has closed. This is the gap usually referred to as a window in Japanese candlestick or bar charts. It is also the type of gap referred to frequently when studying break- away, runaway, and exhaustion gaps.

 SOCIETY OF TECHNICAL ANALYSTS

 CTA

01 This meeting is being recorded. 04

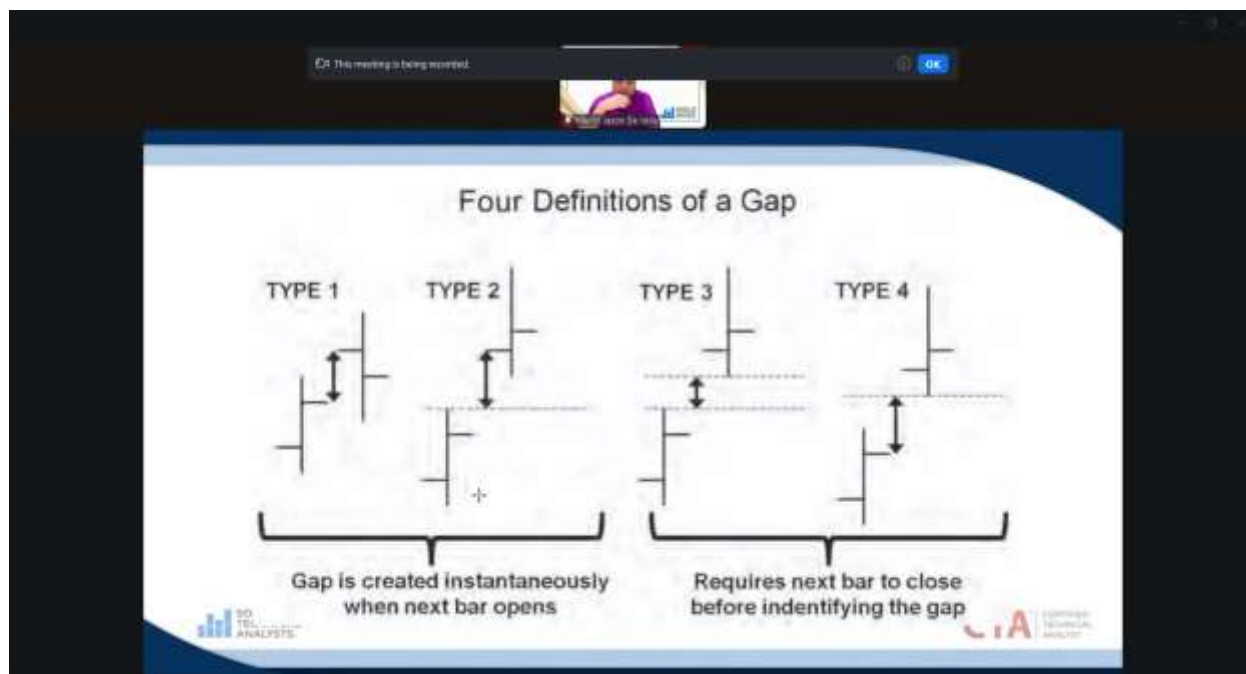

Type 4:

A gap measured from the close of the previous bar to the high or low of the next bar—it is created after the next or current bar has closed. There is no trading activity within the price range from the close of the previous bar to the low or high of the next or current bar.

Constant Chart Measures

There are five types of constant measure charts, namely:

SOCIETY OF TECHNICAL ANALYSTS CTA

- All right? So, these are the gaps, na? Hey, Now, uh, let's see jung mge constant chart measures.
- So there are five na constant measures.

OK This meeting is being recorded. OK

Dr. [Name]

1. Constant Time Charts—bar closes when a specified time interval is met, for example, Candlestick Charts, Bar Charts, Equivolume Charts
2. Constant Range Charts—bar closes when a specified excursion in price is met, for example, Point-and-Figure Charts and Renko Charts
3. Constant Volume Charts—bar closes when a specified volume is met
4. Constant Transaction (Tick) Charts—bar closes when a specified number of transactions (trades) is met
5. Constant Volatility Charts—bar closes when a specified amount of standard deviation or ATR is met

SOCIETY OF TECHNICAL ANALYSTS CTA

- So there are five na constant measures. So, big satishan. As per to na, there is an aspect na constant, and all the other aspects are...
- Perferment. Okay? So, una constant time.

Below are the characteristics associated with constant time charts:

- The bar range is variable
- The bar duration is constant
- The bar volume is variable
- The transactions per bar is variable
- The bar volatility is variable

CTA

ATR

Is not. Okay? So, punta mo na layo down sa...

Constantine, na? So

Japanese Candlestick Charts

Japanese candlesticks are created in essentially the same manner as standard price bars. The only difference is that the space between the opening and closing price is boxed up and is referred to as the real body. Real bodies may be filled or hollow depending on the configuration or relative position of the opening price to the closing price. Real bodies may also be represented as black or white candlesticks.

variable

Tulang yung constant, right?

Whether it's a bar

Meta trader

CTA This meeting is being recorded. OK

Japanese Candlestick Charts

Candlestick formations may be classified as follows:

1. Bullish or bearish
2. Reversal or continuation
3. Simple, double, or multiple

Whether it's a line chart. But I can then...
 Alright, bye. Okay? Now...
 With the permissions, you can see whether there's bullish or bearish.

SOCIETY OF TECHNICAL ANALYSTS CTA

Three-Line break Charts

Three-line break charts are unique in that they possess no measures of constancy. Once price closes above the previous high or below a previous low, a new line is created. Once three successive lines are created, a reversal may only be plotted if price meets or exceeds the low of the last three periods in a downside reversal. There are bullish white lines and bearish black lines.

SOCIETY OF TECHNICAL ANALYSTS CTA

constancy.

- So, this implies range, duration, volume, number of transactions, and volatility.
- Are all variable. Okay? So the three-line break charts...

Equal Price Intervals

The price changes are constant from level to level and are of *equal distances* on the chart.

CTA

Renko, right? Okay? And you can see the difference.
 Between the two charts, although they are the same instrument.
 Okay? Now, if you

On this meeting is being recorded. OK

Prices tend to be more compressed at the upper end

55 is half way
 $(100+10)/2 = 55$

Log 100 = 2.00
 Log 75 = 1.87
 Log 55 = 1.74
 Log 25 = 1.39
 Log 10 = 1.00

Log 55 is greater than halfway which should be at $(2+1)/2 = 1.50$

SOCIETY OF TECHNICAL ANALYSTS CTA

- The chart is constructed with equal Price intervals.
- The distance between each price is equal.
- But there can be charts, switch prices.

On this meeting is being recorded. OK

Prices tend to be more compressed at the upper end

Equal Percentage Intervals

Log 32 - Log 16 = 0.3
 Log 16 - Log 8 = 0.3
 Log 8 - Log 4 = 0.3
 Log 4 - Log 2 = 0.3

The vertical percentage price changes are constant for every equal distance move on the chart

SOCIETY OF TECHNICAL ANALYSTS CTA

- But there can be charts, switch prices. Are not equally ...
- Uh... distance, but instead, it's using logarithm.
- All right

CT: This meeting is being recorded. 04

Dr. [Name]

Insofar as drawing uptrend and downtrend lines using linear and ratio scaling, it behooves the practitioner to note the following:

- Uptrend lines are penetrated sooner while downtrend lines are penetrated later on ratio or logarithmically scaled charts
- Uptrend lines are penetrated later while downtrend lines are penetrated sooner on linear or arithmetically scaled charts

SOCIETY OF TECHNICAL ANALYSTS CTA

[] Uh... distance, but instead, it's using logarithms.
 [] Or equal percentage intervals. So it's about a slowing uptrend or downtrend line.
 [] Using linear ratio

Participants Chat Reactions Screen All Computers Meeting Info Apps Risk Capture More

CT: This meeting is being recorded. 04

Dr. [Name]

Switching between linear and ratio scaling may also result in the following:

- Declining prices may take on a potentially bearish appearance with prices accelerating as they decline in a convex-type fashion, resembling a downward parabolic move on ratio or logarithmically scaled charts
- Rising prices may take on a potentially bearish appearance with prices decelerating as they rise in a concave-type fashion, resembling a flattening out or rounding top formation on ratio or logarithmically scaled charts

SOCIETY OF TECHNICAL ANALYSTS CTA

update
 [] Up the and line are penetrated later, while downtrends are penetrated sooner.
 [] Okay? So, switching between linear and

The Bid-based Chart and Bid-ask Spread

Charts are typically drawn based on bid prices, although many charting platforms also allow for the display of price action based on ask and mid-prices. The use of bid-based price charts has a significant effect on trading chart patterns, pullbacks, and breakouts, by virtue of the spread between the bid and ask prices. It is also dependent on whether we are:

- Buying at the ask
- Buying at the bid
- Selling at the ask
- Selling at the bid

CTA

Are affected by scaling, while numerically, Based are not affected by the scaling.

Green is the bid – sell

Zoom Workplace | Meeting | This meeting is being recorded | 04

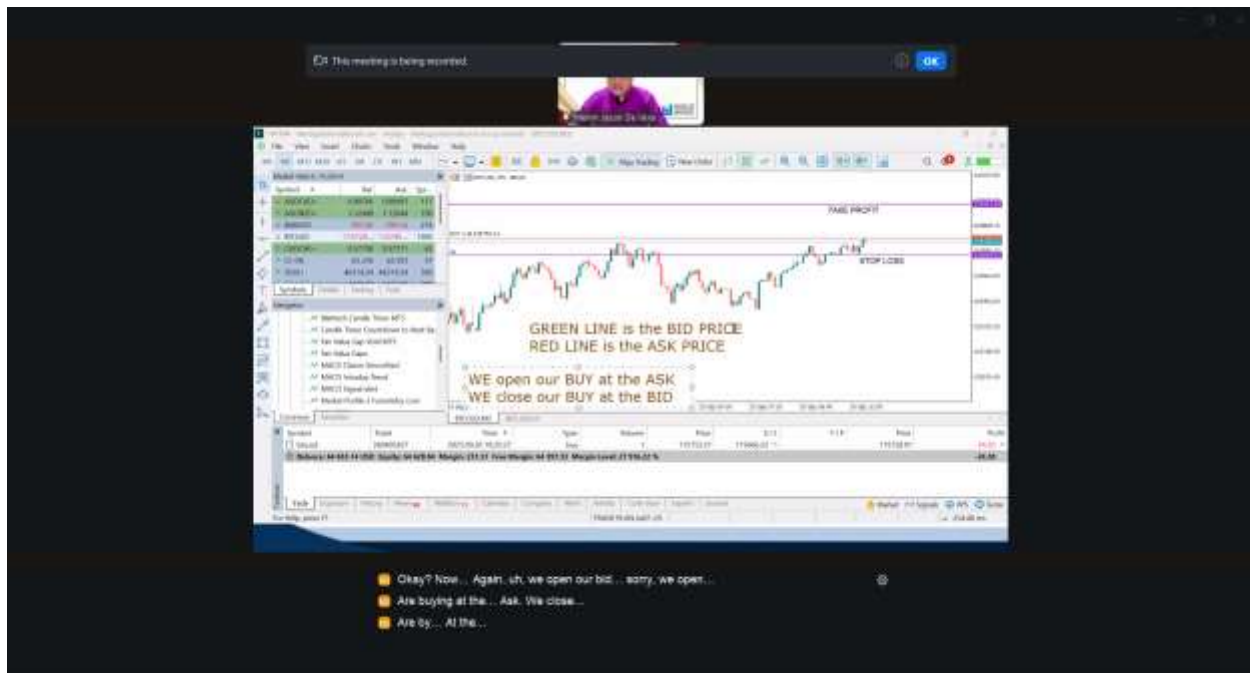

Trading chart interface showing a candlestick chart with a red line (ask) and a green line (bid). The chart is labeled with 'ASK' and 'BID' on the right side. Handwritten annotations include '83' and '84' in red, and 'bid' and 'ask' in green. A text box explains the trading strategy:

We open our BUY positions at the ASK PRICE (red)
 We close our BUY positions at the BID PRICE (bid)

At the same price, so it should be the bid price that will hit it.
 So what's the green line touched this level, out. You're out.
 Very close

Green bid price

Red line is the ask price

Still open even reached the take profit – the answer the spread

Trading Master 24/7

Futures Contracts

Futures contracts were originally created to allow commodity producers a means of hedging against falling prices, and hence they are essentially a bearish mechanism. By shorting an equal amount in the futures market, producers need not worry about falling prices during harvest time. They have already locked in production costs and any potential profit, irrespective of future prices rising or declining. Depending on when the goods are ready for sale, producers may choose nearby or further-out futures contracts to hedge their costs and lock in any profit.

SOCIETY OF COMMODITY TRADERS

So valid, I can write from here. Okay? So let's say it take this one.

This meeting is being recorded.

Describing consolidation and trends via wave cycles and degrees

CTA

So it's like, uh, I think it's gonna bounce. On this level, right?

But it should go below this one. 75.5, that's when I will cut.

Now.

Below are the terms associated with a wave cycle comprising three degrees:

- Higher Wave Cycle (HWC)—highest wave degree relative to the MWC and LWC
- Medium Wave Cycle (MWC)—a subwave of HWC and is of a lower degree than the HWC
- Lower Wave Cycle (LWC)—a subwave of both the HWC and MWC and is at the lowest wave degree

CTA

But it should go below this one, T&E, that's when I will cut.
 Now, describing consolidation... entrance via wave cycles and degrees.
 So we have what we call the higher wave cycle.

A wave of 3 degrees

Medium wave cycle (MWC)

Higher wave cycle (HWC)

Lower wave cycle (LWC)

CTA

So we have what we call the higher wave cycle, Medium wave cycle.
 And lower wave cycle, 3?
 So

On This meeting is being recorded. OK

Robert Allen DA 100%

3. Bar Retracement Symmetry

A change in the number of bars in a retracement is also an early indication of a potential change in trend behavior

CTA

It'll become, uh, short then. And even... shorten.
 Okay? So that's what we call, uh... diminishing or declining, uh... price period.
 Next is

CT: This meeting is being recorded. 04

3. Bar Retracement Symmetry

A change in the number of bars in a retracement is also an early indication of a potential change in trend behavior

And we have only, uh... three attendants.

Instead of 5, before it bounces.

So, now

CT: This meeting is being recorded. 04

Consistent symmetry indicates strong trend action

Symmetry broken (Trend behavior change)

So, now, the symmetry's changing. So, consistency symmetry indicates strong trend action, but if the symmetry is broken.

There will be a

Zoom Workplace | Meeting | This meeting is being recorded | 04

Participant: [Name]

Ab: This means... bullish.

At right, it's a bullish divergence. Meaning, it's downward here.

Will reverse. And

Zoom Workplace | Meeting | This meeting is being recorded | 04

Participant: [Name]

Okay? Possibility of uptrend for the ATR? Yeah, because, uh, your ATR is all the way up there.

Okay?

(continuity of trend action)

- relatively small bar ranges
- approximately equal bar ranges

- Okay? So here we have a strong uptrend, but the ATR is declining. What has happened here?
- Do, right? Because, uh, in spite... despite of the uptrend, your ATR is...
- Declining, okay?
- So, fine, uh, price persistence.

This meeting is being recorded.

James James De W...

The screenshot shows a trading platform interface. On the left is a candlestick chart. In the center, a window titled "Indicators, metrics, and strategies" is open, displaying a list of indicators. The list includes:

Indicator	Value
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34
Stochastic Oscillator (14, 3, 3)	5.34

Right? Uh, not sure if there's a bunch of stochastic and MetaTrader, but I suppose there will be in... TradingView.

Okay, lets try to search for it.

This meeting is being recorded.

James James De W...

The screenshot shows a trading platform interface with a candlestick chart. The chart is annotated with several labels indicating divergence:

- Bullish Divergence
- Bearish Divergence
- Bullish Divergence
- Bearish Divergence
- Bullish Divergence
- Bearish Divergence
- Bullish Divergence
- Bearish Divergence
- Bullish Divergence
- Bearish Divergence

So here, I can see that there's still, uh... This can still go up there.

And it's silver, highly green. Okay? So we can see a possible continuation.

Probably up to \$700. Very arbitrary price.

CT: This meeting is being recorded. OK

8. Angular Symmetry and Momentum

Any change in the angular symmetry is also an early indication of potential bullishness or bearishness in the markets

Declining BRR

Body to range ratio (BRR)

$$= (C - O) / (H - L)$$

Price

Time

- Okay? So you can, uh, use, like, a 3-period moving average.
- You can have your stochastic and check it. There's divergence, okay?
- Number 8.

CT: This meeting is being recorded. OK

Underlying angular symmetry in 3M Co.

All lines are rising at the same angle

Bullish indication

Price

Time

- Okay? So we have here, uh, declining, uh, Pn, okay?
- So, that's body-to-range ratio. Okay? So, here, and this may indicate potential reversal.
- If that's the case.

On This meeting is being recorded

04

Upside acceleration (Bullish)

UPTRENDS

Upside deceleration or flattening (Bearish)

Downside acceleration (Bearish)

DOWNTRENDS

Downside deceleration or flattening (Bullish)

shift.

- Okay? So that's a bullish indication.
- So here, there's an

On This meeting is being recorded

04

Gradually decreasing bar range and flattening out action

CTA

accelerated downward, or decelerated, I mean.

- Okay? Here, it's flattening the downward move. Suddenly becomes flat.
- Okay?

CTA

This one is... Very-uh, very good.

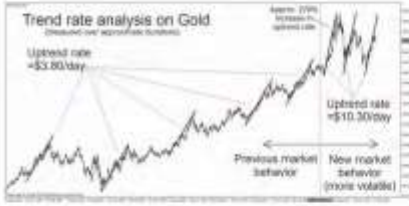

This one's bearish. Why? Because, uh, it's flattening.

Or we can eat. Okay? It's still upward?

CT: This meeting is being recorded. OK

9. Barrier Proximity

There is always a high probability that a trend may reverse as it approaches a strong and significant price barrier

Trend rate analysis on Gold (continued from previous slide)

Uptrend rate $\approx \$3.80/\text{day}$

Uptrend rate $\approx \$10.30/\text{day}$

Previous market behavior

New market behavior (more volatile)

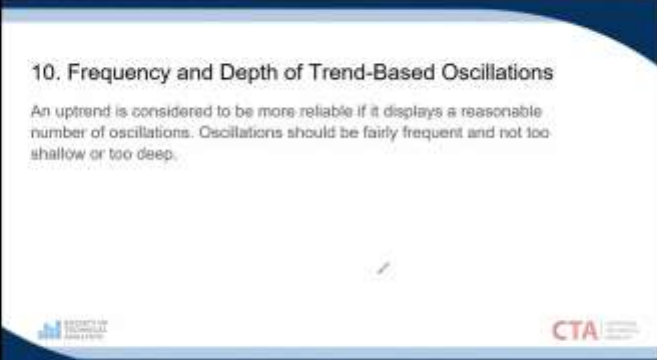

CTA

- higher high, higher low.
- And... that's a bullish. You have to consider the angle of the trend.
- Okay? If they see a rating or accelerating. That's this, uh, barrier prox

CT: This meeting is being recorded. OK

10. Frequency and Depth of Trend-Based Oscillations

An uptrend is considered to be more reliable if it displays a reasonable number of oscillations. Oscillations should be fairly frequent and not too shallow or too deep.

CTA

- Okay? It's like a strong support. Right there. Okay?
- Then, frequency and depth uptrend-based oscillations. So, an uptrend is considered to be more reliable.

Zoom Workplace

Meeting

Attendee: John Doe's screen

This meeting is being recorded

OK

Large number of price oscillations during uptrends

Deep oscillations

Bullish price action with less chance for a severe retracement as there is more profit taking along the way resulting in less fear of losing capital and profit

Smaller number of price oscillations during uptrends

Shallow oscillations

Bullish price action with a high probability of a more severe retracement as, perhaps profit and emotions, create more fear of losing capital and profit

If it displays a reasonable number of oscillations. So as an insurance should be fairly frequent.

And not too shallow or too deep. Okay? So, here

16. Volume and Oscillator Divergence

The appearance of standard or reverse divergence between price and volume, or with any oscillators, may give an early indication of potential reversals or continuations in the market.

Oscillators

- RSI
- CCI
- Stochastics
- MACD

CTA

- You can have your, uh, CCI, Commodity channel index is kind of your stochastics.
- Oh, you're gonna have your MACD.
- Okay, so these are

Oh, this meeting is being recorded.

OK

Price and Trend Filters

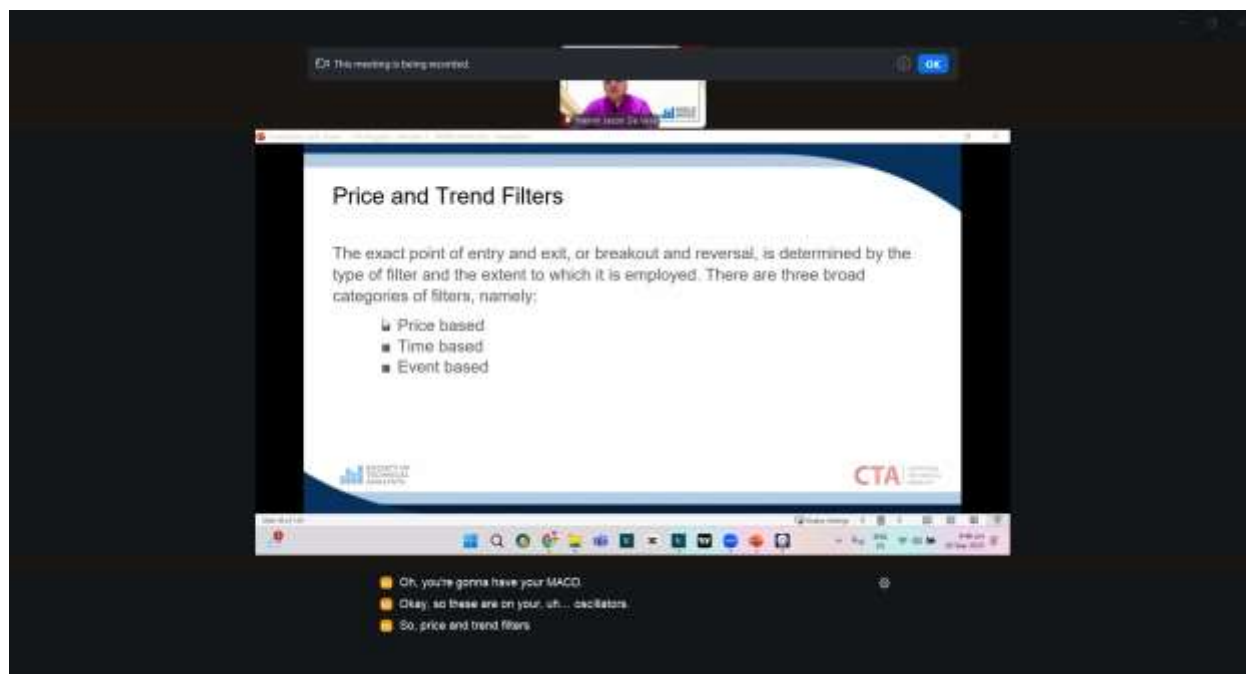

The exact point of entry and exit, or breakout and reversal, is determined by the type of filter and the extent to which it is employed. There are three broad categories of filters, namely:

- Price based
- Time based
- Event based

Oh, you're gonna have your MACD.

Okay, so these are on your, uh... oscillators.

So, price and trend filters.

Oh, this meeting is being recorded.

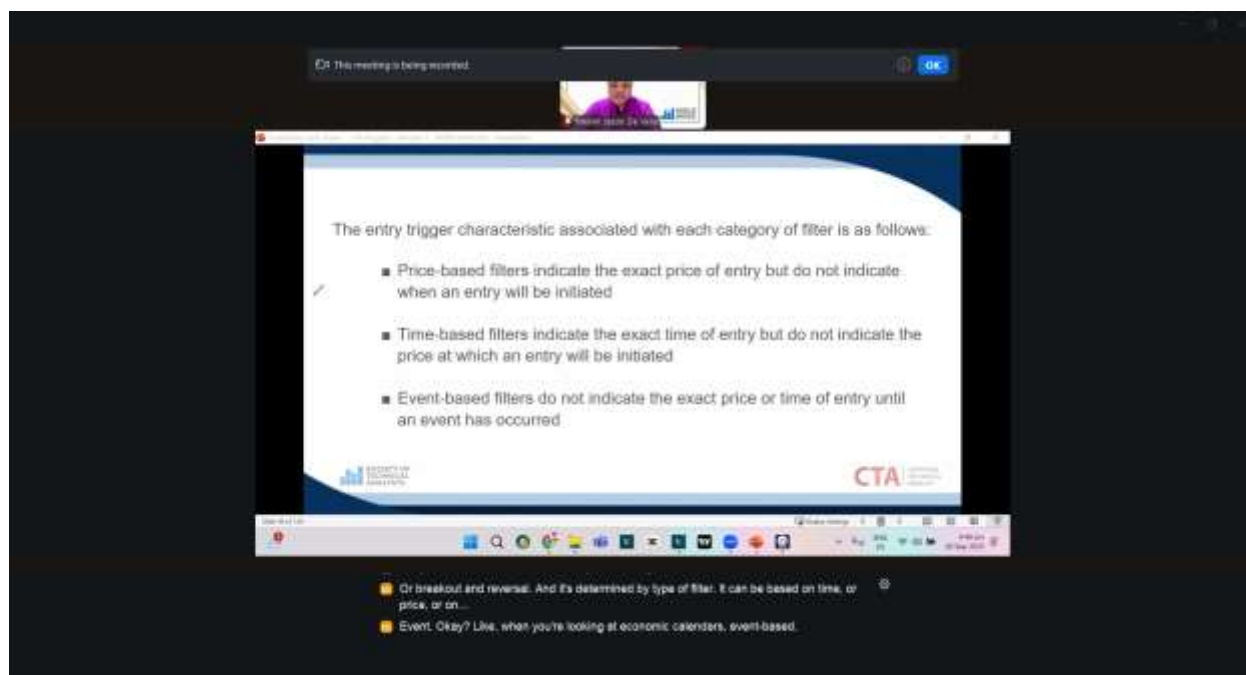

OK

The entry trigger characteristic associated with each category of filter is as follows:

- Price-based filters indicate the exact price of entry but do not indicate when an entry will be initiated
- Time-based filters indicate the exact time of entry but do not indicate the price at which an entry will be initiated
- Event-based filters do not indicate the exact price or time of entry until an event has occurred

Or breakout and reversal. And it's determined by type of filter. It can be based on time, or price, or on...

Event. Okay? Like, when you're looking at economic calendars, event-based.

CTA This meeting is being recorded. OK

Within each broad category of filters, there are subcategories, namely:

1. Price-Based Filters	2. Time-Based Filters
i. Absolute Measure ■ Fixed price excursion ... ii. Relative Measure ■ Percentage of breakout price ... iii. Volatility Measure ■ Multiples of average true range ■ Multiples of standard deviation	i. Duration of N-closed bars

CTA

Okay? Unrelated-based? Like, uh, let's say there's a non-farm payroll, and I will enter when the data is released.

Now, Uh, this

CTA This meeting is being recorded. OK

CTA ASSIGNMENT:

Go to TradingView

Get any chart, Stock, Currency pair, Commodity (gold or oil), Index

Timeframe will be DAILY or H4 chart

Based on the chart, do the following:

- Plot your support and resistance
- Plot your trendlines, identify breaks

Now, set your expected trade:

- Identify your entry point (price or area) and the direction (buy or sell)
- Determine your investment size (your stop loss level)
- Determine your target price or area (your take profit level)

Right area, because sometimes it's a range. Okay? And this will be...

Okay? Your take profit level. Now, why is it a daily and an H4 chart?

Because I want it to be more like a swing, 3. Because the trends are more stable

This meeting is being recorded.
